Classic system default fonts

Goals

- Want to use retro fonts in today's (mostly graphical) environments
- Explore improving the looks of low-resolution fonts

Convert all the things

- Roadblocks to just using bitmap fonts
 - xterm, kmscon: no automatic upscaling
 - pango/harfbuzz: removed PCF format in 2019
 - vgacon: limited to 16×32-sized glyphs
 - inkscape: can't render OTB
- TTF/OTF with outline glyphs best supported form

Approaching this with

- potrace
- HQx, xBRZ
- 
- N2

potrace/inkscape

- [default settings only!]
Input with low pixelcount:
too freestyle about thickness, inconsistent angles
- Input with artificially increased pixelcount:
too faithful about staircase effect

original

traced

bitmap scaled 3x
then traced

HQx / xBRZ

- Produces *bitmap* output, smushes 1px protrusions (crossbar in 'f'), current limit is 6× zoom

```
tropic filter Off  
y Resize mode xBRZ  
ze multiplier Off
```

```
tropic filter Off  
y Resize mode xBRZ  
ze multiplier 6x
```

we'll do it ourselves

- Turn pixels into 4 oriented connected edges, then remove edge overlaps, and remove excess leftover vertices

bitmap form

visualization w/gaps: cubes. edges removed.

final glyph

- CLI: `vfontas ... -savesfd ...`
- save as OTF, , profit

Addressing rough edge

- Identify staircase patterns and modify outline

bearable when
small enough
A24 A18 A12

acceptable across
wider size range
A24 A18 A12

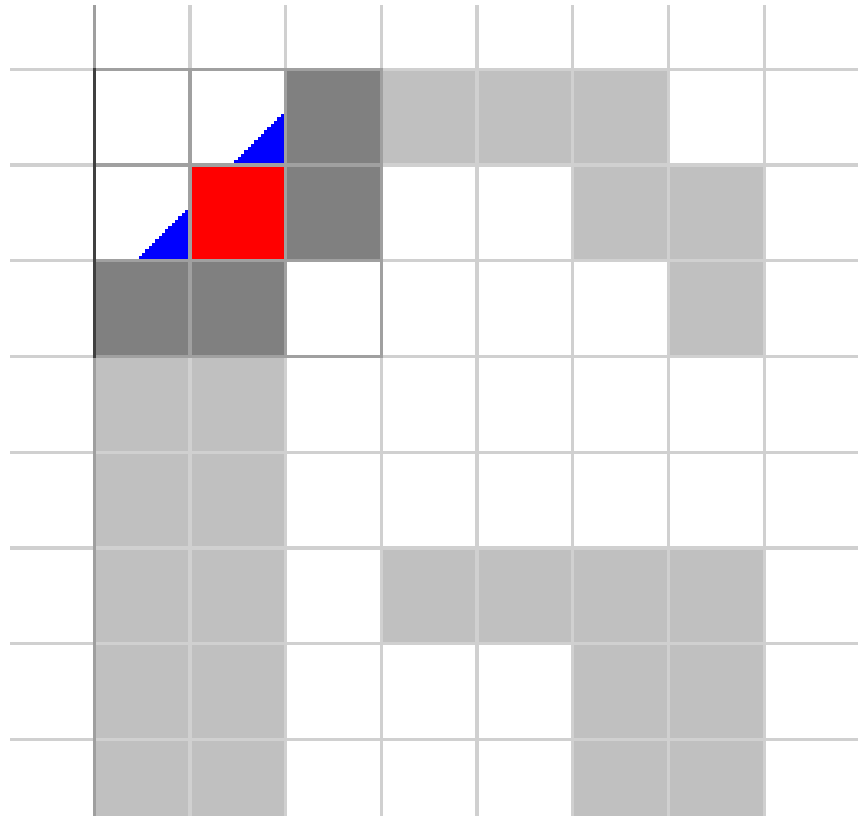

I don't know, Rick,
it looks like "Chicago"

inspired by "Nouveau IBM"
font from 2009

Staircase detection & repair

- similar to many filters:
analyzing each pixel and its
surroundings (e.g.
3×3 window)
- If the window contains a
stair pattern, add/delete
some triangles in the
vector copy
- CLI: ``vfontas ... -saven1 ...``
- 'f' stem problem again

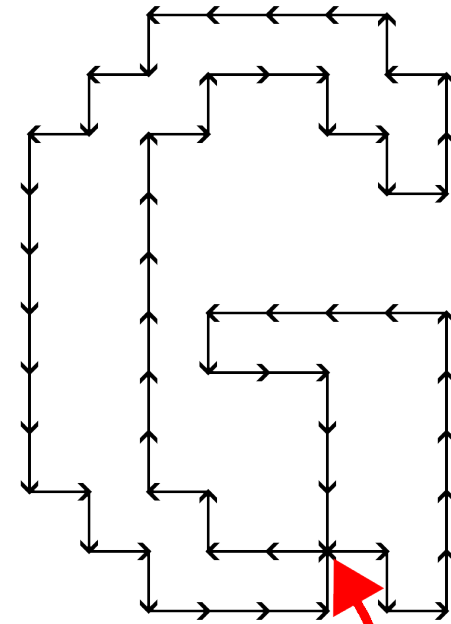

Staircase detector, try 2

- Follow the outline, analyze a window of edges instead
- Nudge vertices/
replace edges
- CLI: ``vfontas ... -saven2 ...``

Current limits

- Ambiguous point locations — connect or don't connect?

isthmus

Thanks for your attention

- Fontpacks, analysis (writeups), sources...
